Upload a concept paper providing a detailed description of your solution. A panel of experts will score submitted solutions according to the [evaluation criteria](#).

Concept papers should be no more than six pages, including any illustrative charts, images, or footnotes. Documents must use a minimum 12-point font and 1-inch margins, and may be single spaced.

CEQ generally solicits ideas for solutions that will accelerate and modernize federal environmental review and permitting. CEQ will most effectively be able to evaluate a submitted idea presented in a format similar to the following:

- **Solution name.** Product name or headline. (up to 10 words)
- **Solution abstract.** Brief description summarizing your solution. (Recommended up to 100 words)
- **Service delivery standards.** Description of which [service delivery standards](#) (recommend up to two) from CEQ's Permitting Technology Action Plan your solution primarily seeks to address. (Recommended up to 200 words)
- **Minimum functional requirements.** Description of which [minimum functional requirements](#) from CEQ's Permitting Technology Action Plan your solution primarily seeks to address in order to meet the modern service delivery standards. (Recommended up to 200 words)
- **Team capacity.** Description of your team — including key members, their relevant experience, and how they have contributed to this solution. Note: In the case of a private entity, the entity must be incorporated in and maintain a primary place of business in the United States, and in the case of an individual, whether participating singly or in a group, the individual must be a citizen or permanent resident of the United States. (Recommended up to 200 words)
- **Proposed solution approach.** Description of the solution, the problem it addresses, and how it works — including its technical architecture, key inputs and outputs, and how it is designed to integrate with or alongside other agency systems and data standards over time. (Recommended up to 300 words)
- **User-centered design.** Description of how the needs of end users — agency staff, project proponents, the general public, or others — are reflected in your solution's design. (Recommended up to 300 words)
- **Impact.** The expected impact of your solution, including how it will meet the service delivery standards addressed and the minimum functional requirements. When possible, quantify the improvements expected as a result of implementing your solution. (Recommended up to 300 words)
- **Readiness.** Description of the current state of your solution, including the solution's readiness to implement, any results or lessons from testing to date, your plans for further development, and how you anticipate implementing this solution within a federal context. (Recommended up to 300 words)
- **Multi-agency compatibility.** Description of how your solution would support compatibility across multiple federal agencies by facilitating data portability, configurability, interoperability, and/or flexibility. (Recommended up to 300 words)

- ☐ I have read and understand the official rules, terms, and conditions and fully agree to them.
- ☐ A member of my team will be available to attend the Permitting Innovators Expo in Washington, DC in July 2026.
- ☐ I grant permission for my solution to be shared with federal agencies through the Council on Environmental Quality's Solutions Catalog.
